Ultimate Uptime

FEATURING JOHN DEERE WORKSIGHT™
AND JOHN DEERE FORESTSIGHT™

JDLINK™ MACHINE MONITORING SYSTEM

Manage multiple machines from one place

JDLink gives you remote access to fleet location, fleet utilization and unparalleled diagnostic data. Now you can easily see what equipment is earning and which machines are idling — all while keeping preventative-maintenance tabs on each machine in your fleet.

Key features include:

- Monitoring machine health
- Extending life through preventative maintenance
- Simplifying maintenance scheduling and documentation
- Increasing uptime through alerts of potential downtime
- Tracking rental fleet machines and their hours of use
- Documenting machine and operator productivity
- Recovering stolen machines through GPS tracking

MACHINE HEALTH PROGNOSTICS

Advanced healthcare for your machines

With proactive data processing, machine health prognostics provide intelligent solutions for your equipment.

Our machine health prognostics program is set-up to focus on out-of-spec fluids, operational practices, and machine conditions before proactively making specific recommendations to halt downtime well before it occurs.

You can receive alerts via SMS text message on your mobile phone. Apps are available for Apple iOS and Android devices that provide machine location information, operations data, and the ability to view and acknowledge alerts.

REMOTE DIAGNOSTICS AND PROGRAMMING

Get ready for big-time uptime

Wouldn't it be great if your dealer could remotely read codes and even fix a problem from miles away while the machine is at work?

Yes, it would, and is. Welcome to the brave new world of remote diagnostics and programming.

- With remote repairs and diagnostics while the machine is working, uptime will soar. Our remote diagnostics and programming capabilities could eliminate the need for a technician responding to your jobsite.
- Dealer technicians can better understand what action needs to be done and what parts may be needed to perform the repairs, reducing the number of hours the technician spends on the machine.
- If a repair is made, the dealer can monitor the affected system to help ensure the problem - and downtime doesn't reoccur.
